

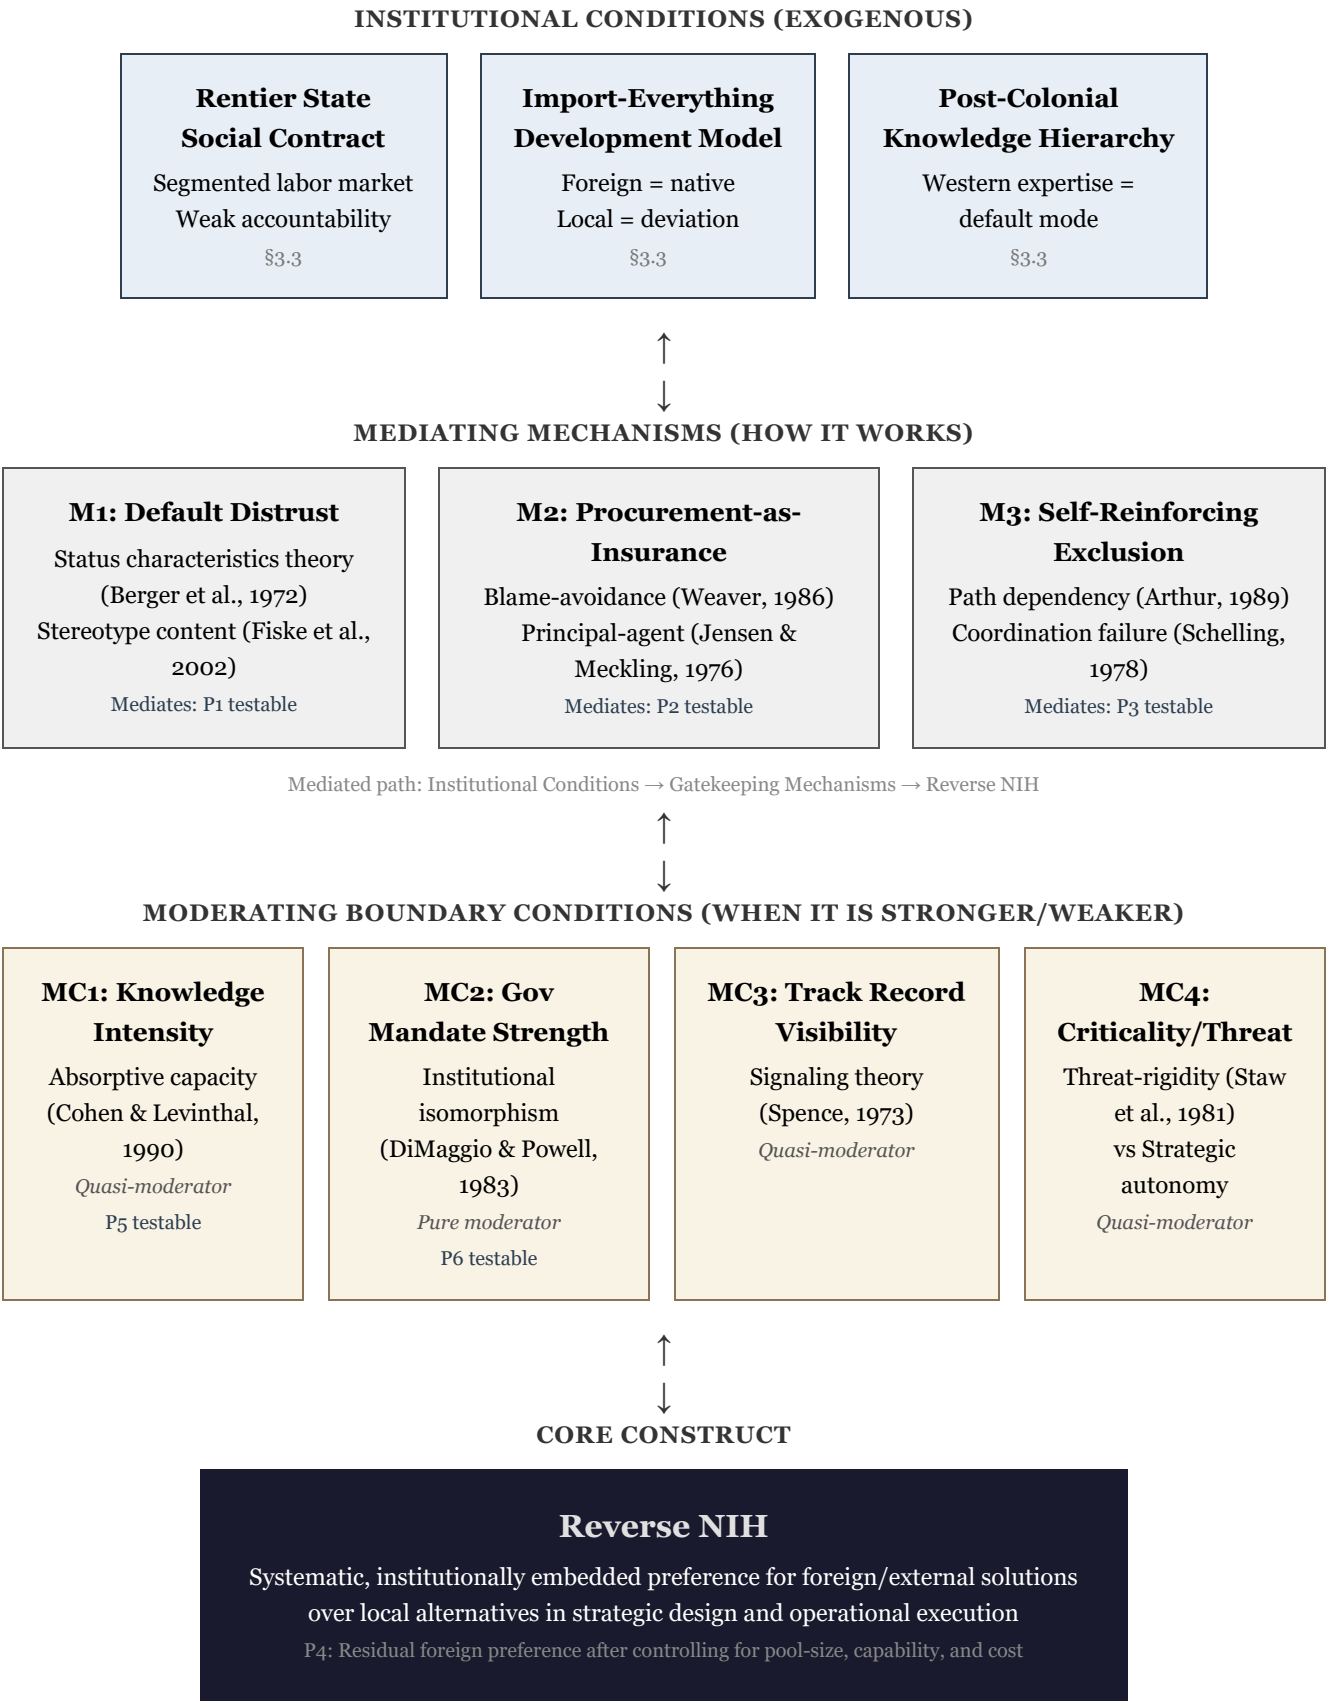

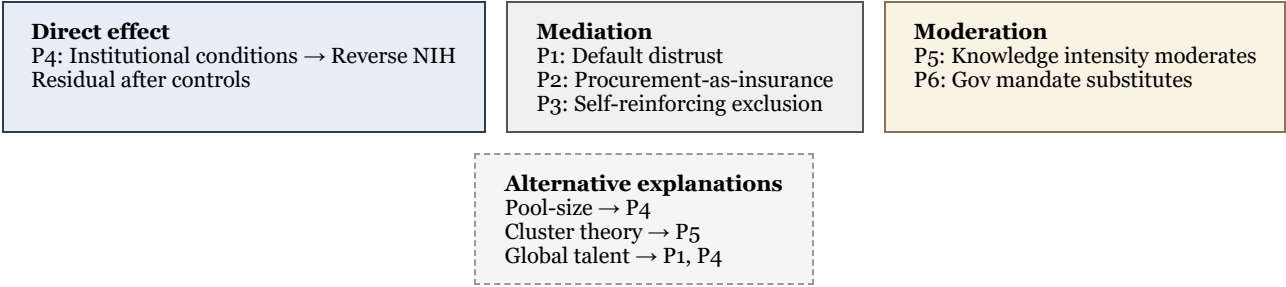

Figure 2: Conceptual Framework for Reverse NIH

Moderated Mediation Model — Institutional Antecedents, Mediating Mechanisms, and Moderating Boundary Conditions

TESTABLE PATHWAYS: PROPOSITIONS (SECTION 5)

The framework distinguishes between mediation (M1-M3: explaining HOW institutions produce Reverse NIH) and moderation (MC1-MC4: specifying WHEN the effect is stronger or weaker), following Baron and Kenny (1986) and Hayes (2013). Dashed line represents alternative explanations testable against the framework.
